

SUTURE RESORBABLE

Practicryl 910

PGLA tressé

Type

Multifilament tressé et enrobé

Composition

Polygalactine 910, copolymère composé de 90% de glycolide et 10% de L-lactide

Revetement

Poly-glycolide-co-lactide et stéarate de Ca (<1%)

Couleur

Violet / Beige - incolore

Réaction tissulaire

Minimale

Résorption

Par hydrolyse, celle-ci est totale en 56 à 70 jours; il persiste 40 à 50% de la force de traction après 21 jours.

Présentation

Boite de 12 pochettes

Tailored for surgery

www.aipsutures.com

SUTURE RESORBABLE

Practicryl 910

Caractéristiques

⦿ Importante force de traction

+ Excellent soutien des tissus

⦿ Synthétique

+ Réaction tissulaire minimale

⦿ Résorption par hydrolyse

+ Niveau de résorption prévisible

⦿ Fil tressé

+ Fil très manipulable

+ Grande flexibilité

+ Très bonne résistance à la traction

+ Très grande sécurité des noeuds

⦿ Multifilament enrobé

+ Passage doux à travers les tissus avec un minimum de sciage et de trauma des tissus

+ Bonne fixation sur noeud

+ Effet de capillarité réduit

⦿ Emballage pratique et hermétique

+ Garantit la stérilité avant et pendant l'utilisation

Indications

Sutures générales et/ou ligatures des tissus mous

EN PARTICULIER :

- + Chirurgie générale
- + Obstétrique
- + Suture de peau
- + Orthopédie
- + Chirurgie gastro-intestinale
- + Urologie
- + Chirurgie plastique
- + Chirurgie ophtalmique
- + Gynécologie

Contraindications

- Chirurgie cardiovasculaire
- Neurochirurgie
- Produit résorbable: à ne pas utiliser lorsque l'on attend un support prolongé
- Prudence chez les patients ayant une cicatrisation retardée (insuffisance immunitaire)

Force de traction

Résorption
