

AIP urinary probes

Urinary catheters for
dogs and cats

Description

To help veterinarians perform urinary catheterization operations, AIP Medical has decided to market its own range of urinary catheters for dogs and cats. Made from semi-rigid medical PVC tubing, they are transparent and greatly facilitate catheterization. They are packaged in blisters and sold in boxes of 10 to 20 catheters. There are several sizes to meet the needs of both dogs and cats. Their length varies from 13cm to 50cm.

For more information about our urinary catheters, please consult the technical section below or contact us.
